

TravelScoot®

Securing a second battery

Instructions

1. Attach the two adhesive loop Velcro pieces around the circumference of the vertical section of the yoke, just beneath the bend, with the cut ends facing inward.

2. Slip the two H-brackets onto the lower battery.

3. Place the second (upper) battery into the H-brackets and align with the lower battery. The upper battery wire should be in the **lower left corner** (viewed from the rear) to allow for connection to the TravelScoot without rearranging the battery positions.
